HOW TO USE THE DIAL-O-MAP

To determine the present time of day in some other city in the world:

1. First check the map and note Time Zone in which you are located.

2. Outer circle of the dial indicates time of day—turn the inner dial of the Dial-O-Map so that your Zone Number lines up with the present time in your city.

3. Next, check the map for the Zone Number of the city from which you wish to receive a program, the time indicated on the outer dial opposite that Zone Number is the time in that c

EXAMPLE: At 10 A.M. in Chicago (Zone 6) what is the time in London (Zone 12)? Turn dial so that Zone 6 arrow points to 10 A.M. and note that Zone 12 indicates time in London to be 4 P.M.

If you are on Daylight Saving Time, be sure to subtract one hour.

NOTE: If Zone Number of city from which you wish to receive a program is larger than your Zone Number, the time indicated is ahead of your time; if smaller, it is behind your time. Keep in mind the International Date Line which separates Zone 24 and Zone 1. For example if you lived in Zone 24 and it was 9 A.M. Tuesday the time in Zone 1 will be 10 A.M. Monday.

PULL OUT

BRIEF OPERATING INSTRUCTIONS

For more detailed instructions, be certain to read the instruction book supplied with this receiver.

1. BATTERY INSTALLATION—Open the rear cover of the cabinet and place the nine 1½ volt type D cells in the battery compartment. When installing these batteries, be certain to install them as indicated by the battery outlines on the bottom of the battery compartment.

2. OPERATING THE RECEIVER—Turn the volume control knob clockwise. Advance the volume until sound is heard. Then rotate the band selector button at the right side of the cabinet to the band you desire and adjust the tuning control until you have tuned to the desired station. Since the wavemagnet is directional it may be necessary to rotate the receiver for best reception.

3. DIAL LIGHT—In the event you are operating this receiver in a dark room where it is very difficult to see the dial scale, press the dial light control located at the lower left control portion of the control panel to the left, this will illuminate the dial.

4. TONE CONTROL—This receiver has the tone control on the lower left portion of the control panel. This new type of control is continuously variable. When the control is turned clockwise the low notes are reduced, at the same time the high notes are given extra emphasis. As the control is turned counter-clockwise, the high notes are reduced and the lower tones are given added emphasis. When in the center position, both high and low tones are reproduced in normal relations.

5. PHONO CONNECTION—A phono input jack is provided at the back of this chassis. Any phonograph using a crystal type cartridge can be connected to this receiver. Connect the phonograph to this receiver by plugging the available cable into the phono jack. Then set the radio-phono switch to phono position. The volume can then be controlled by the volume control in the radio.

6. STANDARD BROADCAST WAVEMAGNET—When operating the receiver on the broadcast band, the Standard Broadcast Wavemagnet mounted in the top of the cabinet would normally be sufficient. However, if you are operating the receiver in a train, plane, hotel or in an automobile, remove the detachable wavemagnet mounted to the back of the chassis; release the wavemagnet extension cable; remove the standard broadcast wavemagnet plug and install the plug on the end of the extension cable, into this socket. Then place this wavemagnet on the center of an outside window.

7. SHORT WAVE RECEPTION—To release the waverod, press on the outside base of the left handle support and lift the handle to a vertical position. Concealed within the handle is the waverod. Extend it to its full height. In average conditions this will be sufficient, however, if you are in a low signal area and wish additional signal pickup, we suggest that a good external antenna and ground be connected to the "A" and "G" terminals at the back of the chassis.

WEATHER BROADCAST SCHEDULES

- *Great Lakes Area*
- *Pacific Coast Area*
- *Atlantic Coast Area*
- *River Navigation*
- *Gulf of Mexico and Caribbean Sea Area*

This weather broadcast schedule has been compiled from information obtained through the cooperation of the United States Department of Commerce, Weather Bureau, and the Canadian Department of Transport. The forecast and explanation of forecasts contained herein are supplied to be of help to sports enthusiasts and others using the Zenith Trans-Oceanic portable on the Great Lakes or in Coastal areas. It is not possible to reproduce complete U.S. or Canadian Weather Broadcasting Schedules in a book this size, consequently we have only listed broadcast of A3 variety (voice transmission). If additional forecasts are desired they can be obtained from the United States Department of Commerce, Weather Bureau or the Dominion Public Weather Office, Toronto, Canada.

WEATHER INFORMATION 150 TO 400 KILOCYCLE BAND (ROYAL 1000D ONLY)

The Civil Aeronautics Authority operates a network of weather navigation stations on the 200-400 kc band throughout the U.S.A. and its territories. At 15 and 45 minutes after every hour, these stations broadcast complete summaries of local weather conditions at the stations broadcasting and at as many as eight or ten other CAA stations from 100 to 300 miles or more away in all directions. While these broadcasts are designed primarily for airmen, they include weather information of great value to boatmen, shippers, farmers, picnickers, tourists, hunters, and fishermen. Along with specialized aviation information, the stations report on temperature, visibility, and wind direction and velocity observed shortly before the hour at each station reported.

In addition, the CAA stations broadcast special storm warnings and radar reports giving the location and intensity of thunderstorms, line squalls, etc., and their direction and rate of movement. There could be, for example, a line of thunderstorms existing from Milwaukee to Rockford moving to the southeast at 15 miles per hour, which would be invaluable information, not only for pilots, but also for people planning to sail or simply to go out on a picnic.

You can secure a catalog of charts showing the CAA stations and most marine beacons, together with their frequencies and call letters, from the Director of U.S. Coast and Geodetic Survey, Washington 25, D.C.

Information regarding the location, frequency and signal identification of marine radiobeacons on the Great Lakes and the coastal waters is included in the Light Lists which are available for purchase through marine suppliers throughout the United States.

LAFOT BULLETINS—FOR USE ON GREAT LAKES

(All references herein to time are in Eastern Standard Time.)

LAFOT BULLETINS issued by Weather Bureau Forecast Center, Chicago, Ill., are transmitted at 6-hourly intervals to supply mariners with wind and weather forecasts for the Great Lakes. To save time and other facilities, when radio or telegraph is used the forecasts are reduced to a system of code figures with plain language. The forecasts cover individual lakes, always appearing in the same order—SUPERIOR, MICHIGAN, HURON, ERIE and ONTARIO.

Each 6-hour issue of LAFOT BULLETINS will cover a 24-hour extent of time, divided into two PERIODS of 12 hours each, stated only as "First" and "Second." The FIRST period starts at Midnight in Lafots transmitted about 11 p.m.; at 6 a.m. in Lafots transmitted about 5 a.m.; at Noon in Lafots transmitted about 11 a.m.; and at 6 p.m. in Lafots transmitted about 5 p.m. The SECOND period runs for 12 hours beginning at the end of the FIRST period. Periods of time will be divided into PARTS or HOURS and the areas of the lakes divided into HALVES, THIRDS OR OTHER FRACTIONS.

Lafot bulletin broadcasts will also contain a weather synopsis for the area within 600 miles of the Great Lakes Region. Each synopsis is based on weather observations taken 4½ hours prior to the time of broadcast. The synopsis will include the location and anticipated movement of pressure centers, troughs, ridges and frontal systems, including barometric pressure, in inches, of HIGH and LOW centers. Transmission of the synopsis follows in Lafots.

Forecasts of wind velocity will show the average wind expected for the location and period stated. For winds below 16 mi/hr, variations from the stated value will usually run as high as 40% and occasionally 70%; for those above 15 mi/hr, variations will run as high as 20% and occasionally 30%. The weather element describes the average condition predicted.

Explanation of LAFOT Code

"DDffW" will be the elements encoded in the 5-figure groups, "DD" being the first two figures, "ff" being the next two figures, and "W" the last figure. Wind direction "DD" will be given in two figures, each code figure equivalent to a direction as shown in the code table printed at right. For example, 0 is calm, 2 is east and 7 is northwest. Whenever the two "D" figures are the same, one of them should be disregarded and the other decoded from the table at right. For example, "44" as "DD" would be decoded as "south"; whenever the two figures are different, each will be decoded and the word "to" will be placed between the two decoded directions; for example, "35" as "DD" would be decoded as "SE to SW." Wind velocity "ff" would be shown in mi/hr; for example, 03 will mean 3 mi/hr; 19 will mean 19 mi/hr, etc. Weather will be encoded in one figure using an appropriate figure from table "W".

Table for "D" (Wind Direction)

Code	Direction	Code	Direction
0	Calm	5	Southwest
1	Northeast	6	West
2	East	7	Northwest
3	Southeast	8	North
4	South	9	Variable

Table for "W" (Weather)

Code	Weather	Code	Weather
0	Fine (mostly clear)	5	Fog (visibility one-half mile or less)
1	Cloudy (or overcast)	6	Lake steam (visibility one-half mile or less)
2	Thundersqualls	7	Light to moderate snow
3	Showers	8	Freezing rain
4	Rain		

Example of LAFOT Bulletin issued for broadcast at 11 p.m. E.S.T.

Superior: First 18347 west half and 11287 east half. Second 87240 west half and 88277 east half. Much colder with temperature falling to 15 by late evening.

Michigan: First 99113 becoming 11193 middle period and 18307 end period. Second 87310. Example of above bulletin as translated. Lake forecasts for two 12-hour periods; the first commencing 12 Midnight and the second commencing at 12 Noon the next day.

DECODED

Lake Superior: First period, wind northeast to north 34 mph with light to moderate snow west half of lake and northeast 28 mph with light to moderate snow east half of lake. Second period, wind north to northwest 24 mph fine weather west half and north 27 mph with light to moderate snow east half. Much colder with temperature falling to 15 by late evening.

Lake Michigan: First period, wind variable 11 mph showers becoming northeast 19 mph showers middle of period and northeast to north 30 mph with light to moderate snow end of period. Second period, wind north to northwest 31 mph fine weather.

Schedules of LAFOT Broadcasts on the Great Lakes are shown in circular entitled "Great Lakes Weather Forecast (LAFOT) and Weather Bulletin (LAWEB) Broadcasts, Marine Wavelengths," issued by this Office; copy of which may be obtained on application to U. S. Weather Bureau Office, Cleveland, Ohio or to any other Weather Bureau station located at a Great Lakes port.

UNITED STATES
GREAT LAKES WEATHER FORECAST (LAFOT)

Great Lakes Weather forecasts (LAFOTS), issued by the United States Weather Bureau Forecast Center, Chicago, Illinois are broadcast by radiotelephone every six hours during the navigation season. United States Radiotelephone Stations transmitting LAFOTS, their schedules, frequencies in kilocycles and weather forecasts included in each broadcast are indicated in the table which follows. All schedules are given in Eastern Standard Time. (75th Meridian Time.)

Station	Location	Lake Forecasts Included in Broadcasts

U.S. STORM AND WHOLE GALE WARNING BROADCAST SCHEDULES

These broadcasts are made immediately upon receipt of the warning at the radio station, on the first SCHEDULED WARNING BROADCAST TIME after receipt, and at 2-hour intervals thereafter until 5 hours after the EFFECTIVE HOIST TIME stated in the warning, unless superseded or cancelled. The cancellation of a warning will be broadcast once only, on the next SCHEDULED WARNING BROADCAST TIME after receipt. NOTE: warning broadcasts are made only during daylight hours by U. S. Coast Guard Radiotelephone Stations except Stations NOG-17, Portage, Michigan, NMP-15, Plum Island, Wisconsin and NMD-24, East Tawas, Michigan. Scheduled warning broadcast times given are in minutes past the even and odd hours, Eastern Standard Time.

LAWEB BULLETIN BROADCASTS

Great Lakes Weather Bulletins (LAWEBS), issued by the U. S. Weather Bureau Office, Cleveland, Ohio, are broadcast by Radiotelephone Station WMI, Lorain, Ohio, four times daily during the navigation season. These bulletins are broadcast in accordance with schedules and on frequencies in kilocycles as shown in the following table. All schedules are indicated in Eastern Standard Time.

Call Sign	Time of Broadcast	Frequencies
WMI	0230	Channels 39—Band 2-4 mc (2514 kc.), 60—Band 4-9 mc (4420.7 kc.)
WMI	0830	Channels 39—Band 2-4 mc (2514 kc.), 60—Band 4-9 mc (4420.7 kc.) and 10—Band 4-9 mc (8797.3 kc.)
WMI	1430	Same as at 0830.
WMI	2030	Same as at 0230 and channel 10—Band 4-9 mc (8797.3 kc.)

Broadcasts made only during daylight hours

CANADIAN LAFOT BROADCAST SCHEDULES

Great Lakes weather forecasts (LAFOTS), issued by the Dominion Public Weather Office, Toronto, Canada, are broadcast by Canadian Radiotelephone Stations every six hours during the navigation season. LAFOTS covering Lakes Superior, Huron, including Georgian Bay, Erie and Ontario and reports respecting dangers to navigation are transmitted in accordance with the schedules indicated. All schedules are given in Eastern Standard Time. Inquiries relating to Canadian broadcasts should be addressed to the Dominion Public Weather Office, Toronto, Canada. All broadcasts are on 2514 kcs.

All Broadcasts Are on 2514 KCS.

Time	Station
3:40 and 9:40 a.m. and p.m.	VBG, Toronto
3:50 and 9:50 a.m. and p.m.	VBF, Port Burwell*†
4:00 and 10:00 a.m. and p.m.	VBC, Midland
4:10 and 10:10 a.m. and p.m.	VBE, Sarnia
4:20 and 10:20 a.m. and p.m.	VBB, Sault Ste. Marie
4:30 and 10:30 a.m. and p.m.	VBA, Port Arthur
4:40 and 10:40 a.m. and p.m.	VBH, Kingston

†Includes South East Shoal wind reports.
*Long Point Local Weather at 9:50

CANADIAN BROADCAST SCHEDULES OF LOCAL WEATHER REPORTS

All Broadcasts Are on 2514 KCS.

Time	Station	Reports
9:10 a.m. 2:00 p.m. 8:00 p.m.	VBH, Kingston	Main Duck Island
9:10 a.m. 1:40 p.m. 7:40 p.m.	VBA, Port Arthur	Caribou & Slate Islands
9:20 a.m. 1:50 p.m. 7:50 p.m.	VBB, Sault Ste. Marie	Caribou & Slate Islands

STANDARD FREQUENCIES AND TIME SIGNALS FROM STATIONS WWV, BELTSVILLE, MARYLAND AND WWVH, MAUI, HAWAII

Station WWV located near Washington, D. C., broadcasts continuously day and night and can be received on frequencies 2.5, 5, 10 and 15 megacycles. Two audio standard frequencies, 440 cycles per second and 600 cycles per second are broadcast on all carrier frequencies. These standard audio frequencies are interrupted each second by a five cycle pulse. The resultant tone is quite similar to a ticking clock.

The audio frequencies start on the hour and continue alternately beginning with a 600 cycle per second tone for three minutes, interrupted for two minutes of information and immediately followed by a 440 cycle per second tone for three minutes and again interrupted for two minutes. Both tones have a five cycle pulse at one second intervals superimposed on them. Each following ten minute period is identical.

The two minute information period for Station WWV on frequencies 2.5, 5, 10, and 15 mc. is composed of the following:

1. 0 to approximately 100 seconds—Silence. (No tone only a 5 cycle pulse at one second intervals.)
2. The interval of 100 seconds to 118 seconds consists of station identification and time in voice—"This is radio station WWV. When the tone returns it will be 2:15 P.M. Eastern Standard Time."
3. At 19.5 and 49.5 minutes past each hour, the interval of 89 seconds to approximately 99 seconds—consists of radio propagation forecast (announced in code).

Note: On WWH there is a 4 minute silent period starting at 45 minutes after the hour and ending at 49 minutes after the hour.

The two minute information period for station WWVH on frequencies 5, 10 and 15 mc. is composed of the following:

1. 0 to approximately 65 seconds—Silence. (No tone only a 5 cycle pulse at one second intervals.)
2. 65 to approximately 82 seconds—consists of universal time (Greenwich Mean Time) and station identification announced in code.
3. At 9.5 and 39.4 minutes past each hour, the interval of 83 seconds to approximately 96 seconds—consist of radio propagation forecast (announced in code).

Note: On WWVH there are two silent periods, the first a four minute period starting on the hour and ending four minutes after the hour. The second four minute silent period starts at 30 minutes after the hour and ends at 34 minutes after the hour.

For further information on Stations WWV and WWVH contact

U.S. Department of Commerce
National Bureau of Standards
Boulder Laboratories
Boulder, Colorado

requesting letter circular LC1023.

SHORT-WAVE STATION CHART

The time schedule below is designed to help you select any Short Wave Station operating at the time you wish to tune in your receiver. FIRST—select the time zone that affects your area. If you are not living in any of the time zones listed, space has been provided for you to write in your time. SECOND —select the time column that corresponds with the time you are starting to tune in. THIRD—run your finger down that time column and you will find various stations in operation or beginning to operate. Keep in mind the coding affecting A.M. and P.M. Open time in the Broadcast schedules is indicated below with open circles. Fill in the circles if you detect changes in the broadcast time. NOTE: ADJUST FOR DAYLIGHT SAVING TIME!
